

Project Description:

Italian Pick Restaurant booking website is a website that allows customers to book tables at a specified time and date. A customer must first register in the website to be able to use it. There will be pages containing information about the restaurant as well as contact information. They can also view the menu of the restaurant.

The main function of this website is that customers will be presented with options of reservations; they'll need to fill in info like the date and time of the desired reservation, as well as the type of table and number of people. They will then have the option to check out and pay reservation bills.

Another significant function is that employees of the restaurant can enter this website by their username and password, view and manage reservations, add new tables, and modify or delete available tables.

The aim of this project is to have a flexible and easy website to use which increases the satisfaction of customers by serving them the right way. This website will enable customers to reserve a table in their favorite restaurant at any time, and organize the work flow of employees in the restaurant.
